INTERACTING WITH FINCONTRACTS ON ETHEREUM

Maciej Żurad

FINCONTRACTS-LIB

- a node.js package

- implements logic for dealing with Fincontracts

- single-step install

```
npm install --save fincontracts-lib
```

- documentation @ https://doc.esdoc.org/github.com/asiron/fincontracts-lib/

CORE API

- Fincontract - blockchain's Fincontract in memory

- FincNode - blockchain's Fincontract description node in memory

- Deployer - deploy and/or issue Fincontracts

- Evaluator - current or estimated value of a Fincontract

- Executor - join and choose Fincontracts

- Fetcher - fetch Fincontracts from the blockchain

- Parser - parse Fincontract's string description

- Serializer - serialize Fincontracts into JSON

- DotGenerator - generate DOT graphs from Fincontracts

FINCONTRACTS-CLI

```
git clone git@github.com:asiron/fincontracts-cli.git
```

- **blockchain** - bash script for managing private-net

- **fincli** - CLI for interacting with blockchain deployed Fincontracts

$ ./blockchain

blockchain management tool	
$ ./blockchain setup	creates new accounts, preallocates ether, compiles & deploys smart contracts
$ ./blockchain deploy	compiles, deploys smart contracts & creates JS instantiation scripts
$ ./blockchain start | stop | restart	starts, stops or restarts geth node
$ ./blockchain attach	attaches to currently running geth node

$ ./fincli

Commands:

```
help [command...]                         Provides help for a given command.
exit                                      Exits application.
connect <host>                            Connects to a local Ethereum node
register                                  Registers the currently selected account
show-balance                              Shows balance of the currently selected account
select-account <index-or-address>         Selects an Ethereum account for sending transactions
list-accounts                             Lists unlocked Ethereum accounts
create-fincontract [options] <expr>       Creates a Fincontract and deploys it to the blockchain
join-fincontract [options] <id>           Joins a Fincontract given its <id> from the currently selected account
pull-fincontract [options] <id>           Pulls a Fincontract from the blockchain.
show-fincontract [options] <name>         Shows detailed information about a saved Fincontract as text or graph
list-fincontracts [options]               Lists all saved Fincontracts
delete-settings                           Wipes out all user settings (autocomplete, saved fincontracts)
example <index>                           Deploys one of the examples from marketplace smart contract
```
